Panic Exit devices

Panic Exit devices

ISEO is a leader in the production and design of locking systems and access control solutions. Continuity, a creative flair and specialisation make it a symbol of quality.

The values that have inspired the production of our panic devices have always been:

Safety: Our products offer peace of mind in the homes of millions of families.

We have also been chosen by important institutions to supply our products for large scale projects.

Quality: We offer the highest standard of international certification in all markets.

Respect: For all the people who work with us every day, for the world and the cultures that populate it, for the environment in which we live.

Index - To Sections

Our products cover all areas of market demand: from residential buildings to large commercial and financial complexes, accomodation and transport facilities, and critical infrastructure.

Rim devices

EN1125 and EN179

The search for new performance for our products (in full compliance with current regulations) has allowed us to achieve high levels of performance and quality.

CYCLIC DURABILITY OF ALL DEVICES: 500.000 CYCLES

All rim panic and emergency exit devices have been tested in accordance with the standards **UNI EN1125** and **UNI EN179** up to 500,000 operating cycles.
The maximum threshold defined by the standard is 200,000 cycles.

ALL DEVICES NOW WITH **GRADE 7** DOOR WEIGHT CLASSIFICATION

All rim panic and emergency exit devices have been tested in accordance with the requirements of the standards **UNI EN1125** and **UNI EN179** on doors with mass of more than 200 kg.

1°	2°	3°	4°	5°	6°	7°	8°	9°	10°

CERTIFICATE OF APPROVAL NO CF 5233

OPERATING TEMPERATURE: **TESTED FROM -25°C TO +60°C**

All rim panic and emergency exit devices have been tested in accordance with the requirements of the standards **UNI EN1125** and **UNI EN179** between **-25°C and +60°C**. The maximum threshold defined by the standard is from -10°C to +60°C.

ENDUR4NCE

ENDUR4NCE FINISH

The new ENDUR4NCE finish has been created to satisfy the many applications that require a long-lasting surface finish visually similar to metal. Devices with the **ENDUR4NCE** finish have been tested in compliance with the standard **UNI EN 1670**, and have reached excellent aesthetic and functional results, with up to 1600 hours of neutral salt spray (NSS) corrosion testing.

DOUBLE THE SAFETY: **PANIC EXIT FUNCTIONALITY AND ANTIBACTERIAL PROTECTION**

According to its commitment to safety, ISEO has developed pioneering solutions to safeguard the health of those using its products and, in particular, its panic exit bars - devices used extensively in public facilities and for all applications where hygiene and health protection are fundamental prerequisites, such as hospitals, clinics, crèches, schools etc.

For years, these panic exit devices have also been treated with the AntiGerm antibacterial coating, to ensure even greater safety. The effect of this antibacterial treatment is permanent, and does not require any special maintenance. It is based on the continuous release of silver ions, and remains effective for the entire lifespan of the product, even if the surface is scratched.

The action of the antibacterial treatment AntiGerm reduces bacteria level by 99% and its performance has been certified by independent laboratories according to ISO 22196 standard.

IDEA Base

Producing safety systems means ensuring the peace of mind of customers who choose us.

More than fifty years of specialisation reflect the quality of the products we offer, and the passion for what we do. The IDEA Base panic devices line is designed, developed and manufactured directly by ISEO with a single point of focus: to guarantee the highest levels of safety and reliability in accordance with the UNI EN1125 standard.

In the design of the devices, design and aesthetics were not neglected, as they are distinctive features of the IDEA Base series. They are particularly suitable for installation on glass doors and metal doors with a low profile.

The IDEA Base guarantees tried and tested performance with easy installation, modularity, versatility and a high level of safety.

Key features:

- Certificates: CE Marking according to Regulation 305/2011 CE (CPR).
- Modularity thanks to a wide range of accessories.
- Reversibility: can be installed in a right or left configuration.
- Adaptability: can be adapted to any type of frame and configuration (aluminium, PVC, wood, etc.).
- Possibility of installation on glass doors thanks to the BELVEDERE Kit.
- Configurable: for installation on single leaf or double leaf doors.
- Reliability: the entire range has been tested according to the parameters required by the UNI EN1125 standard, up to 500,000 cycles.
- Ease of installation: three different fixing possibilities depending on the frame.
- Fast to install: they have the automatic spring-action rod attachment system, without screws.
- Solidity, with an oval anti-rotation push bar in steel.
- Finishes: black, metal grey, ENDUR4NCE, with the application of the ANTIGERM antibacterial treatment.
- Special versions. PVD-inox.
- Can be integrated with ISEO access control systems.
- Signage not included.

ENDUR4NCE

Superior corrosion resistance

The ENDUR4NCE finish combined with the AntiGerm antibacterial treatment makes ISEO panic exit devices ideal for installation in particularly corrosive environmental conditions, in public facilities and for all applications where hygiene and safeguarding health are fundamental prerequisites, such as: hospitals, clinics, nursing

homes, crèches and nursery schools.

The superior corrosion resistance of the visible components of ISEO rim type panic exit devices is matched by the latches in stainless steel, while the self-locking systems on all latches increases burglary resistance.

ENDUR4NCE

Key features:

The ENDUR4NCE finish is applied in a 3-step process:

- With a CROMITATE PRIMER layer.
- An initial layer of powder coat paint.
- A second coat of liquid based paint combined with the ANTIGERM permanent antibacterial treatment.
- Signage not included.

In-house testing conducted in compliance with the standard UNI EN 1670 demonstrate the excellent performance of this finish, which resists up to 1000 hours of neutral salt spray (NSS) corrosion testing.

TOUCH

The Touch panic device allows ease of installation, reversibility and convenience thanks to a wide range of accessories available even in case of installation of different models in the same environment.

Its clean line offers an aesthetic harmony with the bars of the IDEA series.

The minimum footprint and reusability are firm points, without neglecting the highest levels of safety and reliability in

accordance with the UNI EN1125 standard.

Escape routes, in addition to being a guarantee for the safety of people in the event of fire or alarm, can be a critical point for the security of the environments and the goods contained in them.

If not properly monitored, they are in fact the ideal way to escape from the premises with stolen goods or for unwanted intrusions.

Key features:

- Anti – thrust.
- Pre-set for manual hold open device.
- Reversibility: can be installed in a right or left configuration.
- Pre-set for micro switch.
- Fast and easy to install reducing labour time.
- Attractive aesthetic design.
- Rounded edges for safer usage
- No exposed moving parts.
- Compatible with any ISEO external access device ORDERED SEPARATELY
- Signage not included.

Push Sirena

Panic device with acoustic signal, which avoids complicated and expensive installations

Push Sirena is installed as a traditional panic exit device but has an acoustic alarm: when it is activated, it immediately detects any unauthorized opening of the escape route door. Therefore, it represents the ideal solution for shops, small warehouses and all places where escape routes need constant monitoring. Through a selector operated by a key

half-cylinder the user can program the functions and choose the device status, namely: ON, OFF and BREAK (courtesy function allowing exit without triggering the alarm). If the bar is pressed and the alarm is ON, the powerful siren emits a strong acoustic signal (90dB). The device LEDs show the current status as well as the battery status.

Key features:

- Courtesy function allowing exit without alarm.
- Alarm reset by key only.
- Acoustic and LED signals showing the device and battery status.
- Powered by 2 AA alkaline batteries. (over 2 years of life without alarms)
- 3-level battery charge indicator.
- Selector compatible with European half-cylinders (size 30+10 with 8-position DIN cam).

To order Push Sirena use the following order codes:

Sirena Attachment Grey : IS942-00093

Sirena Attachment Black : IS942-00095

Please note that ISEO Touch Bar is ordered separately

Device Status (Key operated)

- OFF:
the bar can be pressed without triggering the alarm.
- ON:
the alarm, both acoustic and visual, comes into operation when the bar is pressed.
- Break or courtesy function:
a temporary status (5 sec.) within the ON status allowing exit without triggering the alarm.
- Ongoing alarm:
when the alarm is ON and the bar is pressed, the device emits a strong acoustic signal and a red LED flashes.

Push Electro

INTELLIGENT MOTORISATION

Push Electro is much more than a simple panic device: it incorporates intelligent motorisation and strictly complies with the EN 1125 standard. Thanks to the integration of a state-of-the-art motor, this device offers a motorised opening functionality that facilitates access and ensures peace of mind and freedom of movement for all users.

Key features:

- Motorised opening
- Equipped with self-locking steel latchbolts.
- Allows continuous monitoring.
- Compatibility with ISEO Access Control software.
- Can be operated by pressing buttons or switches.
- Designed to integrate perfectly with panic doors in any context.

OPERATING MODES

Push Electro offers several operating modes to suit every security need:

REMOTE OPENING

A simple touch is enough to activate the device, which opens and remains active for the preset courtesy time. This is ideal for high-traffic environments where efficiency is crucial.

HOLD-OPEN

In situations where it is necessary to hold the door open for an extended period of time, the hold-open function allows the device to remain open until it is returned to the closed position. It is important to note that this function should not be used on fire-resistant doors to ensure compliance with safety regulations.

Electronic external control for Panic devices with access control function

The external electromechanical control Trim-Tronic for panic and emergency devices is part of the range of accessories for rim devices.

It can be combined with all ISEO rim panic and emergency devices

in all configurations and locking points. It allows access control both mechanically with key and handle, and electronically from remote. Trim-Tronic has achieved the IPX5 protection class which allows applications even in outdoor environments.

Key features:

- Usable with ISEO mechanical rim lock panic exit bars with 1, 2 and 3 latch points (including at top and/or bottom of door).
- Handle enabled temporarily with an remote electrical control signal (button 1):
 - pulses shorter than 6 seconds in duration enable the handle for 6 seconds;
 - pulses longer than 6 seconds in duration enable the handle for the entire duration of the pulse.
- The handle may also be enabled by inserting, turning and removing the mechanical key.
- An electrical control (button 2) may be used to disable use of the mechanical

INSTALLATION IN OUTDOOR APPLICATIONS

With a **protection rating of IPX5*** (casing offering protection against water spray). The **Trim-Tronic** control is also suitable for outdoor applications.

Trim External control

All compatible with any ISEO Panic Exit Device featured within this publication

The Trim external control for panic and emergency devices is part of the range of accessories for rim devices. It can be combined with all ISEO rim panic and emergency devices in all configurations and locking points. It has an anti-vandal system and is available in black, and metal grey, Endur4nce (metal-like finish).

It can be provided with a status signalling microswitch, an open-door key anti-removal device and a lowered handle, perfect for

industrial entrance doors. The special AntiGerm antibacterial treatment (only in painted versions) releases silver ions for the entire life of the product: it requires no maintenance and makes this device perfect for being fitted in buildings in which hygiene and health protection are important and essential.

The Trim external control is made in compliance with EN1125 and EN179 standards.

Key features:

- High durability tested.
- Aesthetically designed
